Summary

B.Tech Artificial Intelligence and Data Science student graduating in 2027, with experience developing Android AR applications, React interfaces, and backend API integrations. Applies object-oriented programming and data structures to application logic and user-facing workflows. Seeking an **Application Development Intern** role at **PharmEasy**.

Work Experience

CYMAX Jan–May 2026

Unity Developer Intern

- Developed a Unity 360-degree video player for VR headsets with spherical rendering, headset/controller input, and playback controls.
- Built a React playback client and Python services for VR streaming, integrating authentication, token-controlled content access, and encrypted video delivery.

Indian Institute of Information Technology, Sri City May–Jul 2026

XR and Simulation Intern

- Developed the Alipiri–Tirumala AR Navigation app as part of a collaborative project with **IIT Tirupati** and **Tirumala Tirupati Devasthanams (TTD)**.
- Structured application logic using service-locator, event-bus, object-pool, and state-machine patterns to separate navigation, sensor processing, and user-interface components.
- Developed a demo environment for ISRO's third launch pad using **Unreal Engine 5**.

Projects

OpthaMiss | Eye-Screening Application GitHub

React.js, Vite, Tailwind CSS, Axios, Python, FastAPI, Docker

- Built a React interface for image upload and screening results, with drag-and-drop input, model-specific instructions, and result cards.
- Integrated FastAPI prediction endpoints for anterior and fundus images with structured risk and referral responses; packaged the frontend and backend in a multi-stage Docker build.

Alipiri AR Navigation | Android Walking-Guidance App GitHub

Unity, C#, AR Foundation, ARCore, JSON, A Pathfinding*

- Developed an offline Android AR app for the Alipiri–Tirumala route, integrating GPS and visual-inertial localization with route guidance and landmark information.
- Implemented A* routing with spatial indexing and reusable search buffers; built an event-driven navigation HUD with progress, ETA, and tracking-status updates.

StickerMe | Portrait-to-Sticker Application GitHub

React.js, TypeScript, Vite, Python, FastAPI, SQLAlchemy, SQLite

- Built a React/TypeScript interface for portrait upload, generation progress, sticker review, caption editing, and PNG/ZIP downloads; integrated FastAPI through HTTP and server-sent events.
- Implemented durable background jobs, cancellation and recovery, and saved version history with comparison and restore workflows backed by SQLite.

Excel-to-App | Spreadsheet-to-API Compiler GitHub

React.js, Python, FastAPI, PostgreSQL, SQLAlchemy, Docker, pytest

- Built a spreadsheet-to-API workflow with schema review, a dependency-graph explorer, and a calculation playground; implemented parsing, cycle detection, and a 66-function evaluator.
- Exposed versioned REST APIs and execution audit records; documented **481/481 matching comparisons across 37 cases** against LibreOffice on a shipping-calculator fixture.

Technical Skills

Languages: C#, Python, JavaScript, TypeScript, SQL
Application Development: React.js, Capacitor, Unity, AR Foundation, ARCore, Tailwind CSS
APIs and Data: REST APIs, JSON, Axios, FastAPI, PostgreSQL, SQLite, Firebase Firestore
Tools and Fundamentals: Git, GitHub, Docker, pytest, OOP, data structures and algorithms

Education

Indian Institute of Information Technology, Sri City 2023–2027 (expected)

B.Tech in Artificial Intelligence and Data Science

Class XII: 92.3% – BGS PU College, Sidlaghatta | Class X: 97.6% – BGS Public School
